

# Khan M. Sakib Sarfuddin

Thane, Maharashtra, India | khsakib2005@gmail.com | +91-7045967039 | [LinkedIn](#) | [GitHub](#)

## PROFILE SUMMARY

Electronics & Telecommunication Engineering student skilled in AWS, Terraform, Kubernetes, and CI/CD, with hands-on experience building and deploying production-style cloud infrastructure.

## EDUCATION

**Fr. Conceicao Rodrigues Institute of Technology (FCRIT)**

2023 - 2027

B.E. in Electronics & Telecommunication Engineering

## TECHNICAL SKILLS

**Cloud Platform:** AWS (EC2, S3, IAM, VPC, CloudWatch, Lambda, DynamoDB)

**IaC & Scripting:** Terraform, Python, Bash, Linux (Ubuntu)

**Containers & Orchestration:** Docker, Kubernetes, EKS

**CI/CD:** GitHub, GitHub Actions, ArgoCD

**Security & Monitoring:** CodeQL, Trivy, Prometheus, Grafana

**Core Concepts:** OOPs, Computer Networks, Operating Systems, Cloud Computing, Network Security

## EXPERIENCE

**Research Intern - Visual Image-Based SLAM, IIT Dharwad**

June 2025 - Dec 2025

- Set up and maintained a Linux-based (Ubuntu, RPi OS) development and deployment environment for a real-time SLAM pipeline (ROS, OpenCV), managing build toolchains and resolving cross-platform CMake/dependency conflicts.
- Benchmarked and tuned system performance across PC and resource-constrained edge (Raspberry Pi 4) Linux environments, adjusting resolution and frame-rate to meet compute/memory limits for reliable edge deployment.

## PROJECTS

**Cloud-Native DevSecOps Platform - Personal Project**

July 2026 - Aug 2026

[GitHub](#)

- Built a production-style GitOps platform on AWS EKS (Terraform, GitHub Actions, ArgoCD, HashiCorp Vault), provisioning 15+ resources across a multi-AZ VPC with zero-touch deployment.
- Enforced automated security gates (Trivy, CodeQL, secret scanning) in a 3-stage CI/CD pipeline, catching and remediating a real CRITICAL CVE before deployment.
- Achieved 100% zero-downtime deployments under live load testing, with GitOps self-healing reverting unauthorized changes in under 10 seconds and node-failure recovery in under 4 minutes.

**AWS Terraform Infrastructure - Personal Project**

June 2026 - July 2026

[GitHub](#)

- Architected a multi-tier AWS infrastructure (VPC, ALB, EC2, RDS) with modular Terraform, auto-deployed via GitHub Actions CI/CD on every push to main.
- Set up remote state (encrypted S3 backend + DynamoDB locking) and Terraform workspaces to isolate dev/prod environments from one codebase.
- Secured credentials via AWS Secrets Manager and live-tested CloudWatch/SNS alerting across EC2, RDS, and ALB health metrics.

**SMC-LiveMonitor - IoT + AI Sewer Worker Safety System**

Feb 2026 - Apr 2026

[GitHub](#)

- Built a wearable safety device (gas sensors, vitals monitoring, fall detection, water level sensing) with LoRa communication and a Firebase dashboard for real-time monitoring.
- Implemented ML-based hazard risk scoring; won ₹50,000 and placed Top 5/546 teams, with the project noted for real-world deployment potential.

## ACHIEVEMENTS

- SAMVED Hackathon - Won ₹50,000, Top 5/546 teams (IoT + AI, municipal interest).
- SPIT Hackathon (HackFusion) - Top 58/1000, national-level IoT competition.
- VESIT Hackathon - Top 6/500, ranked Top 2 in the healthcare problem statement.
